

The critical path is

BYT-29 -> BYT-146 -> BYT-154 -> (BYT-155/BYT-50/BYT-147/BYT-91/BYT-145)

since it is the longest path. The components on the bottom of the tree depend on the data pipeline which depends on the initial set up.

To keep on schedule:

- 1) Ensure that BYT-29 is finished soon to avoid blocking others
- 2) Start the sprint on time
- 3) Communicate with teammates regarding suggestions, ideas, issues and any updates
