

The critical path is: BYT-8 -> BYT-7 -> BYT-83 -> BYT-80 as this is the longest path on the tree and the data in it depends on the data pipelines.

What to do keep on schedule:

1. Ensure that BYT-8 is completed ASAP as well as all the pipelines that are needed to create charts.
2. Start the sprint as soon as possible
3. Discuss ideas and exchange ideas on how to solve any problems that arise.
4. Ensure that sprint messages are completed and everyone giving updates
