In contrast to the previous sprint, the velocity of the sprint is normal and is matching with the Actual vs Optimized burndown lines. It can be observed that tickets were completed in a timely manner at the start of the sprint. Hence, this sprint's burndown chart will not present a steep drop near the end compared to previous sprints. This sprint is a huge improvement compared to all the previous sprints. This is due to avoiding past mistakes, starting work early, improved planning and coordination, and keeping a manageable workload for all group members.
