## Sprint 1 Burndown Chart

Sprint 2 Burn down chart

In sprint 2, our curve dropped steeply towards the end for several reasons.

- One of our teammates had gotten sick with COVID-19 therefore he wasn't able to complete his work until the end of the sprint and 1 story had to be moved to the next sprint. During reading week, he had a exam, therefore he didn't have time to complete it earlier.
- Many things were still new to the team such as Redux and how to work with it, specifically in react using thunks thus presenting a higher learning curve than anticipated.
